

Model Test 7

Part I

Part I Listening Comprehension - Section A

Directions: In this part, you will hear 10 short conversations. At the end of each conversation, a question will be asked about what is said. Each conversation and the question will be spoken only once. When you hear the question, read the four choices of the answer given and choose the best one by marking the corresponding letter A, B, C, or D on your Answer Sheet I.

Audio: <https://image.logicmoriarty.top/UCASListening/Listen/Model%20Test%207.mp3>

1. Listen to the conversation

- A. A formal suit for her graduation ceremony.
- B. A casual dress for a small gathering.
- C. A fantastic dress for her performance.
- D. A warm coat for cold days.

2. Listen to the conversation

- A. To help their friend do something voluntarily.
- B. To travel in a group for sightseeing.
- C. To list some places and get information for them.
- D. To write some travel articles.

3. Listen to the conversation

- A. In the hall of a hotel.
- B. In their room of a hotel.
- C. In their relative's house.
- D. In a restaurant.

4. Listen to the conversation

- A. The woman has lost a cat recently when he carried it in a bag.
- B. The woman doesn't want the other people to celebrate his birthday.
- C. The woman almost told Josh the secret in advance.
- D. The woman was sorry for the lost cat.

5. Listen to the conversation

- A. An insurance agent.
- B. A saleswoman of furniture.
- C. A bank teller.
- D. An architect.

6. Listen to the conversation

- A. He's bought a stereo with a lower price.
- B. His new stereo has a good sounding system.
- C. He's happy because he's just got an expensive stereo.
- D. The woman doesn't know why he's so glad.

7. Listen to the conversation

- A. The man is lucky and he's passed his exam.
- B. The man has cleaned his sweater.
- C. The man finally finished his test on time.
- D. The man put on his sweater in a hurry.

8. Listen to the conversation

- A. To give a present to the dean.
- B. To give a party for the dean's retirement.
- C. To give a birthday party for John.
- D. To give a party for John's retirement.

9. Listen to the conversation

- A. The expenses of their tour.
- B. The professor's plan of the concert.
- C. The way of their traveling.
- D. The places they're going to travel to.

10. Listen to the conversation

- A. He is asking for an absence for his math class.
- B. He has a sore throat and cannot call the professor himself.
- C. He lives two doors down from the professor.
- D. He feels ashamed for talking to the professor about his problem.

Part I Listening Comprehension - Section B

Directions: In this part, you will hear two mini-talks. While you listen, complete the sentences in your Answer Sheet II for Questions 11 to 20 by writing NO MORE THAN THREE WORDS in each sentence. You will hear each talk or conversation TWICE.

Audio: <https://image.logicmoriarty.top/UCASListening/Listen/Model%20Test%207.mp3>

11. Even if your manners are _____ in your own culture, you may sometimes upset people in Britain. _____

12. British people probably don't know much about your country or culture, and fear they might _____ you by speaking inappropriately. _____

13. The easiest way for British people to avoid embarrassment is not to _____ and start speaking to you. _____

14. British people may worry about _____ your own personal space. _____
15. If you are a woman, a British man may worry that if he starts speaking to you, you will feel _____
16. The Nobel Prizes are awarded to those who shall have conferred _____ on mankind during the preceding year. _____
17. Nobel was a conscientious _____
18. Nobel contributed to the inventions of synthetic rubber, _____ and synthetic leather. _____
19. Winning a Nobel Prize is a _____
20. The award leads to worldwide recognition highlighting one's life work and _____ to continue and further the mission. _____
-

Part I Listening Comprehension - Section C

Directions: Short answers.

Audio: <https://image.logicmoriarty.top/UCASListening/Listen/Model%20Test%207.mp3>

21. According to parapsychologists, what natural ability do humans have? _____
22. In the first experiment, how long did Baker stare at the unknowing people in public? _____
23. What did Baker ask the subjects to do in the second experiment? _____
24. What makes up the 70 percent of communication? _____
25. What should men do before they are introduced to someone important? _____
26. What is common in introduction in the East? _____
27. What is harmful to both nature and human life? _____
28. What is one of the main causes of the large amount of dangerous waste? _____
29. Why are industries unwilling to deal with the dangerous waste problem? _____
30. How much of the waste can be reduced by using existing technologies and methods? _____
-

Part II

Part II Use of English - Section A

Directions: Cloze test.

I don't view my important characteristics as different from those my family has imparted on me throughout the years. The pride, care, dedication, effort, and hard-working attitude that I view as critical to any success I may 31 have all descended upon me courtesy of my close-knit, Italian family.

When I was born as the child of two immigrants who came here with nothing, only one possessing a college degree, the importance of a good work 32 was stressed by my parents from day one. Through their actions in their jobs and through the 33 lessons on life I began to get from the moment I could communicate, they set an example for me to follow, one of being proud of what I do, no matter what it was, and 34 to care about everything I do as if everything had a big impact. This 35 that everything had to be done right and be done well. Undoubtedly, following their own advice carried my parents from their 36 as blue-collar immigrants who labored as factory workers to white-collar citizens, one of whom owns his own business 37 the other works as a bank officer. Those ascensions from nothing only served as other examples for me to follow, examples that delineated the ability for a person to improve through 38

Another quotation from my father 39 me from the time I started school to today, "No matter what you do, you have to be the best." This 40 the inner drive that motivates all my actions. It was what forced me to try hard in school 41 I didn't know English well enough to always understand the teacher. It's the reason why I have developed my skills. It 42 my dedication to all activities, and to the hard work. I put into all of them as I 43 lead both in class and out. Essentially, my parentage was the first quality that 44 me as a leader. Despite all the talk of being a leader, I have never lost 45 of the importance of my family. I know I owe my family everything, and, as a result I'll always be close with it.

45. Fill in blank 45. _____

Part II Reading Comprehension - Section B - Passage 1

Directions: Read the following passages carefully and then select the best answer.

That experiences influence subsequent behavior is evidence of an obvious but remarkable activity called remembering. Learning could not occur without the function popularly named memory. Constant practice has such an effect on memory as to lead to skillful performance on the piano, to recitation of a poem, and even to reading and understanding these words. So-called intelligent behavior demands memory, remembering being a primary requirement for reasoning. The ability to solve any problem or even to recognize that a problem exists depends on memory. Typically, the decision to cross a street is based on remembering many earlier experiences.

Practice (or review) tends to build and maintain memory for a task or for any learned material. Over a period of no practice what has been learned tends to be forgotten; and the adaptive consequences may not seem obvious. Yet, dramatic instances of sudden forgetting can be seen to be adaptive. In this sense, the ability to forget can be interpreted to have survived through a process of natural selection in animals. Indeed, when one's memory of an emotionally painful experience leads to serious anxiety, forgetting may produce relief. Nevertheless, an evolutionary interpretation might make it difficult to understand how the commonly gradual process of forgetting survived natural selection.

In thinking about the evolution of memory together with all its possible aspects, it is helpful to consider what would happen if memories failed to fade. Forgetting clearly aids orientation in time, since old memories weaken and the new tend to stand out, providing clues for inferring duration. Without forgetting, adaptive ability would suffer; for example, learned behavior that might have been correct a decade ago may no longer be. Cases are recorded of people who (by ordinary standards) forgot so little that their everyday activities were full of confusion. Thus forgetting seems to serve the survival of the individual and the species.

Another line of thought assumes a memory storage system of limited capacity that provides adaptive flexibility specifically through forgetting. In this view, continual adjustments are made between learning or memory storage (input) and forgetting (output). Indeed, there is evidence that the rate at which individuals forget is directly related to how much they have learned. Such data offer gross support of contemporary models of memory that assume an input-output balance.

46. According to the passage, memory is a prerequisite for us to
- A. identify suspicious behavior.
 - B. test adaptive ability in an evolutionary process.
 - C. learn and understand new knowledge.
 - D. forget the previous experiences.
47. From the evolutionary point of view,
- A. forgetting for lack of practice tends to be obviously inadapative.
 - B. if a person gets very forgetful of a sudden he must be very adaptive.
 - C. the gradual process of forgetting is an indication of an individual's adaptability.
 - D. sudden forgetting may bring about adaptive consequences.
48. Which is the proper explanation of the word "fade" (L.2, para.3)?
- A. Disappear.
 - B. Decrease.
 - C. Demonstrate.
 - D. Declare.
49. According to the passage, if a person never forgot,
- A. he would survive best.
 - B. he would have a lot of trouble.
 - C. his ability to learn would be enhanced.

D. the evolution of memory would stop.

50. From the last paragraph we know that

- A. forgetfulness is a response to learning.
- B. the memory storage system is an exactly balanced input-output system.
- C. memory is a compensation for forgetting.
- D. the capacity of a memory storage system is limited because forgetting occurs.

Part II Reading Comprehension - Section B - Passage 2

Directions: Read the following passages carefully and then select the best answer.

No very satisfactory account of the mechanism that caused the formation of the ocean basins has yet been given. The traditional view supposes that the upper layer of the earth behaves as a liquid when it is subjected to small focus for long periods and that differences in temperature under oceans and continents are sufficient to produce movements in the upper layer of the earth with rising currents under the mid-ocean ridges and sinking currents under the continents. Theoretically, these movements would carry the continental plates along as though they were on a conveyor belt and would provide the forces needed to produce the split that occur along the ridge. This view may be correct; it has the advantage that the currents are driven by temperature differences that themselves depend on the position of the continents.

On the other hand, the theory is unconvincing because the movements do not normally occur along lines, and it certainly does not occur along lines broken by frequent changes in direction, as the ridge is. Also, it is difficult to see how the theory applies to the plate between the Mid-Atlantic Ridge and the ridge in the Indian Ocean. This plate is growing on both sides, and since there is no intermediate trench, the two ridges must be moving apart. An alternative theory is that the sinking part of the plate, which is denser than the hotter surroundings, pulls the rest of plate after it. Again it is difficult to see how this applies to the ridge in the South Atlantic, where neither the African nor the American plate has a sinking part.

Another possibility is that the sinking plate cools the neighboring mantle and produces motion currents that move the plates. This last theory is attractive because it gives some hope of explaining the neighboring mantle and produces motion currents that move the plates. This last theory is attractive because it gives some hope of explaining the enclosed seas. These seas have a typical oceanic floor, except that the floor is overlaid by several kilometers of sediment. Their floors have probably been sinking for long periods. It seems possible that a sinking current of cooled material on the upper side might be the cause of such deep basins. The enclosed seas are an important feature of the earth's surface and seriously require explanation.

51. According to the traditional view of the origin of the ocean basins, which of the following is sufficient to move the continental plates?

- A. Spreading of ocean trenches.
- B. Movements of mid-ocean ridges.
- C. Sinking of ocean basins.

- D. Differences in temperature under oceans and continents.
52. The author refers to a "conveyor belt" in the first paragraph in order to
- A. illustrate the effects of movements in the upper layer of the earth.
 - B. show how temperature differences depend on the positions of the continents.
 - C. describe the complicated motions made possible by the ocean currents.
 - D. account for the rising currents under mid-ocean ridges.
53. Which of the following, if it could be demonstrated, would most support the traditional view of ocean basin formation?
- A. The upper mantle of the earth behaves as a dense solid.
 - B. Movements usually occur along lines.
 - C. Sinking plates cool the surface of the earth.
 - D. The rising motion currents keep exact pace with them.
54. Which of the following does the author seem to prefer?
- A. The traditional view of the origin of the ocean basin is totally wrong.
 - B. The temperature of the sinking plate is lower than its surrounding.
 - C. That the earth behaves as a liquid results in the division of the waters.
 - D. Neither the African nor the American plate moves according to the alternative theory.
55. Which of the following would be the best title?
- A. Several Theories of Ocean Basin Formation.
 - B. The Traditional View of the Oceans.
 - C. Motions and Ocean Currents.
 - D. Temperature Differences Among the Oceans.
-

Part II Reading Comprehension - Section B - Passage 3

Directions: Read the following passages carefully and then select the best answer.

Teaching about diversity is synonymous with a quality education in health care. The focus on diversity is not a separate aspect of quality teaching in and of itself. Rather, it is a key attribute for the development of clinical reasoning skills. However, incorporating diversity concepts into the curricula of the health professions may be more difficult for many faculty members than delivering pathophysiology content. Moreover, ethnically diverse minority and underserved vulnerable populations require health care professionals that are knowledgeable of components inherent in the delivery of their health care. To achieve the goal of integrating diversity concepts into existing courses requires institutional support and faculty commitment.

Over the past decades, there have been three emerging population trends in the United States. First, the minority population is increasing at higher rates than the white population. Guhde's article highlights the growth of the Hispanic and Asian populations and the need to facilitate the progression and graduation of the English as a Second Language student. This article is significant because of the

tremendous need for health professionals who are bilingual. In many urban hospitals and other health care delivery agencies, thirty to fifty percent of the patients may not speak English. Moreover, when demographic data are linked to health indicators, minorities are worse off than whites. For example, Hispanics have a disproportionate burden for cancer deaths compared to the white population. According to the Institute of Medicine, a key component that affects health disparities is cultural competency. Being culturally competent potentially improves care and may aid in reducing the burden of health disparities. Implementing fundamental change requires that health care professionals understand these disparities and make a personal commitment to make a difference.

A second trend in the United States is an increasing rate of poverty among its children. Access to care is a significant problem for low-income populations and contributes to disparities in health for this population. Providing health care to the nation's vulnerable populations is hampered by both a limited number of culturally competent providers as well as a significant shortage of health care providers

The third trend is the under representation of minorities in schools of nursing and medicine. The lack of representation of minorities in these professional schools leads to a lack of diversity in the nursing and medical workforce. Studies indicate that minority nurses are more likely to work with minority populations and participate in community-based health promotion programs with vulnerable populations.

56. Which of the following describes the importance of diversity concepts in clinical education?

- A. Teaching about diversity is a separate part of quality teaching.
- B. Diversity concepts help improve clinical reasoning skills.
- C. Diversity concepts provide relief for vulnerable populations.
- D. Diversity concepts are very difficult to master than clinical skills.

57. What can we infer from Guhde's article?

- A. The minority population is larger than the white population.
- B. Many Asian students need better chances to learn English.
- C. Less than 30 percent of health professionals are bilingual.
- D. Minorities need improvement in health care.

58. How do Hispanics compare with the white population in terms of health indicators?

- A. Minorities are much financially poorer than the whites.
- B. They have to pay much more than the whites for every treatment.
- C. More Hispanics die of cancer than the whites.
- D. Hispanics are becoming less proficient in English.

59. What does the phrase “make a difference” in the second paragraph probably mean?

- A. Discriminate against.
- B. Widen the gap.
- C. Distinguish oneself.
- D. Exert influence.

60. Vulnerable populations would probably get better treatment if
- A. a number of culturally diverse care providers would be available.
 - B. medical workforce would not discriminate for minorities.
 - C. disparities between minorities and whites would be ignored.
 - D. more minorities would go to the whites' hospitals for treatment.
-

Part II Reading Comprehension - Section C

Directions: In the following passage, five sentences have been removed from the original text.

Since the early work of Halberg (1960), the existence of human “circadian rhythms” has been well-known to biologists and psychologists. Circadian rhythms dictate that there are certain times of the day when we are at our best both physically and psychologically. At its simplest, the majority of us feel more alive and creative in the mornings, while come the evenings we are fit only for collapsing with a good book or in front of the television. 61

Irrespective of our personal rhythms, most of us have a productive period between 10 a. m. and noon, when the stomach, pancreas, spleen and heart all appear to be in their most active phases. 62 The simple rules here are: don't waste too much prime time having a coffee break around 11a. m. when you should be doing some of your best work, and don't make the after-lunch period even less productive by overloading your digestion. A short coffee or tea break is, in fact, best taken on arrival at the office, when it helps us start the day in a positive mood, rather than mid-morning when it interrupts the flow of our activities. Lunch is best taken early, when we are just beginning to feel hungry, and we are likely to eat less than if we leave it until later. 63

Changes in one's attitude can also enhance personal time management. For example, the notion of pro-action is eminently preferable to reaction. 64 To react, on the other hand, means to have little anticipation and do something only when events force you to do so. Pro-actors tend to be the people who are always one step ahead of other people, who always seem to be in the right place at the right time, and who are always better informed than anyone else. Many of us like an easy life, and so we tend to be reactors. 65 We can train ourselves in pro-action by regularly taking the time to sit down and appraise the likely immediate future, just as we sit down and review the immediate past.

Word Bank

- | | |
|--|---|
| A. To pro-act means to anticipate events and be in a position to take appropriate action as soon as the right moment arrives. | B. This means that we aren't alert to the challenges and opportunities coming our way, with the consequence that challenges bother us or opportunities pass us by before we're even properly aware they're upon us. |
| C. Others of us note that in the morning we take a great deal of time to get going physically and mentally, but by the evening are full of energy and bright ideas, while a very few of us feel most alert and vigorous in the late afternoon. | D. Certainly, there are occasions when other people are more responsible for our time loss than we are, but for most of us, and for most of the time, the blame must fall fairly and squarely upon ourselves. |

E. Conversely, the majority of us experience a low period in the hour or two after lunch (a time when people in some societies sensibly take a rest), as most of our energy is devoted to the process of digestion.

F. An early lunch also means that we can get back into our productive stride earlier in the afternoon.

61. _____

62. _____

63. _____

64. _____

65. _____

Part III

Part III Writing - Section A

Directions: Read the following article and write a summary.

Among the white-collar crowd, though, one particular gizmo has earned a street nickname all its own: CrackBerry. That's a reference to the RIM BlackBerry, an addictive wireless palmtop that displays your e-mail in real time, as it arrives.

The airports and commuter trains on both coasts are filled with BlackBerry fanatics, hunched over, eyes glazed, flailing at its microscopic alphabet keyboard with their thumbs callused in funny places.

But for all its popularity among executives and financial-industry types, the BlackBerry is virtually unknown to everyone else. RIM hopes to change all that with the BlackBerry 7,100t, which it unveiled on Sept. 8. The device, with phone service from T-Mobile, will go on sale next month.

RIM believed that everyday consumers avoided the original BlackBerry for two reasons. First, the price was way too high: \$500 for the BlackBerry, plus about \$30 a month for Internet service on top of a voice plan. That one was easy to fix; the 7,100t costs \$200, plus \$60 a month for both unlimited Internet and 1,000 anytime phone minutes.

The second reason is that the BlackBerry's Thumbelina keyboard is nearly 3 inches, or 76 centimeters wide. Recent BlackBerry models are also cellphones, and 3 inches is awfully wide for a phone. As you walk down the street, you feel as if you're talking into a frozen waffle.

The new 7,100t is a narrower 2.3 inches. In fact, it's nearly the same size and shape as a standard non-folding cell phone.

But what about the keyboard? A full set of alphabet keys wouldn't fit; for proof, RIM's designers had to look no farther than the popular Treo 600, the BlackBerry's main rival. The Treo has a full alphabet keyboard but even though the phone itself is wider, its keys are the size of hydrogen atoms.

A standard 10-key phone keypad was out of the question, too; trying to compose e-mail on number-dialing keys is like trying to mow the grass in a sports stadium with fingernail scissors.

So once again, RIM devised something nobody had ever tried before: a keyboard with 20 keys. The payoff is obvious; compared with standard cell phone keys, these are positively gargantuan. There are only five keys on each row, so even the beefy of thumb will have no trouble hitting the right keys. Of course, now the screaming question is: How do you produce 26 letters and all the numbers when you have only 20 keys?

RIM's solution was to double up. Most of the keys have two letters painted on them; for example, the top four keys are labeled QW, ER, TY and OP. You just hammer away at the keys you want, ignoring the gibberish that may appear at first.

By the time you complete each word, the phone's software has consulted its database of 35,000 words and deduced your intentions. It's a crazy, way-out plan, but it actually works.

Three factors conspire to make the typing process tolerable and once you're rolling along even enjoyable. First, the BlackBerry learns new words once you've corrected them, and preferred

interpretations after you've corrected the phone twice.

Second, the BlackBerry's software saves you time in myriad little ways. You can omit periods, apostrophes and capitalizing the first words of sentences. Just hit the space bar twice after a sentence to supply both the period and the initial capital.

Finally, all of this typing takes place on one of the brightest, highest-contrast color screens you've ever seen on a cell phone. You even have a choice of font and size for all the text displays, which, together with the unusually broad, brightly lit keys, makes this gadget especially friendly to the over-40 set.

As on existing BlackBerry models, the screen isn't touch-sensitive; instead, you roll the thumb dial to select a menu or icon, and push inward to select it. Navigation is foolproof, thanks to the dedicated Back button on the side.

Corporate e-mail users really have it made; their BlackBerries, backed at the office by something called enterprise server software, are real-time mirrors of their PC in-boxes. Reply on the BlackBerry, find the reply in your Sent Mail box back at the office.

Everyone else will have to settle for a system in which your e-mail is wirelessly auto-forwarded, every 15 minutes, to your phone.

When you return to your Mac or PC, you'll have no indication that you replied, composed, filed or deleted messages on your BlackBerry.

On the other hand, you can open up Word, Excel and PDF files right on the phone.

66. Write a summary of no more than 150 words on the article.

Part III Writing - Section B

Directions: Write an essay.

67. Do you think corporal punishment is justifiable in disciplining children? Give your reasons.
